

# OUR SERVICES

## UTILITY LOCATING AND DETECTION

By utilizing ground penetrating radar and electromagnetic technologies GPRS is able to identify the location of known and unknown subsurface utilities and infrastructure. These technologies, in the hands of our trained expert technicians, are able to provide information on the horizontal and vertical location of subsurface utilities such as water lines, sanitary sewer lines, communications lines, electrical lines, underground storage tanks and many more. Not only can these elements be located but GPRS also offers start to finish services from markings to final AutoCAD drawings to ensure you have permanent records of the utility findings.

## CONCRETE SCANNING

With ground penetrating radar technology, GPRS can locate rebar, post tension cables, and conduits that are embedded in or just beneath the concrete. The professional technicians of GPRS have been trained to provide accurate and effective GPR data interpretation to ensure our clients know the location of critical structural elements and other important objects embedded in or found just below the concrete surface.

## WHY GPRS

Our commitment is simple; fair pricing, predictable availability and consistent quality anywhere in North America. We are the most dependable source for the answers you need regarding the subsurface concerns on your project because we care about...

- ✓ **ACCURACY** - GPRS has been proven to be 99% accurate.
- ✓ **AVAILABILITY** - GPRS is driven to provide our services as fast as possible, often within 24 hours.
- ✓ **ABILITY** - GPRS provides the most advanced technologies in locating to your project via expert technicians.
- ✓ **ALLEGIANCE** - GPRS is committed to your projects success because when you succeed, so do we.

## SAFETY

### SAFETY CONSCIOUS

The technologies utilized by GPRS are non-destructive, non-intrusive and non-hazardous. This means that they will not only help you avoid subsurface hazards but your job site personnel will be safe while testing is being conducted.

### QUALITY ASSURANCE

All GPRS technicians are educated in our world class training facility and mentored by experienced team members to ensure you receive quality results on your project.

### RESULTS DRIVEN

GPRS seeks to understand your information needs at the start of every project and we strive to generate answers to your subsurface question thereby helping your project stay on budget and on schedule.
